EXPERIENCE

Senior Software Engineer · Xcode · Artificial Intelligence · Cloudflare Workers Apr 2024 – Present
XC Wizard · xcwizard.com Remote

- Built a fully automated **iOS and watchOS** software factory called **Xcode Wizard** — Swift, TypeScript, and Node.js; 1,500+ Xcode projects, brief to shipped app in up to 24h.
- Agent orchestration** — planner decomposes briefs into tasks, agents iteratively write and edit files, run integration tests and self-heal against the build before resolving to release.
- Apple ecosystem mastery**: SwiftUI, SIWA, StoreKit 2, Apple Pay, APNs, ASC automation, signing, certificates, and alternative distribution/licensing paths.
- Cloudflare** per app automation — Zones, Workers, Durable Objects, R2, Neon/PostgreSQL.

Software Engineer · React Native · GraphQL · Citrus Ads May 2023 – Apr 2024
Zapp · justzapp.com Belgravia, London

- Owned end-to-end **Citrus Ads** — sponsored placements and banners; partnered with ops and Citrus's dev team; delivered solo, with impressions and engagement tracking.
- Wrote tests, shipped behind **feature flags** and A/B experiments, and shared release rota.
- Daily **GraphQL** architecture with backend as fulfilment scaled; trusted engineer owning large codebase areas early.

Software Engineer · React Native · Firebase Mar 2021 – Apr 2023
Train Effective · traineffective.com Remote

- Mobile app redesign — translated UI specs from pixel mockups into density-aware React Native **components** in Storybook, bringing amazing user experiences to life.
- Integrated **Amplitude** and **BigQuery** SQL for user journeys and product analytics — events, funnels, and feature instrumentation.
- Trusted mobile team member; led developers across Tbilisi, Manila, Australia, and Russia.

Summer Technology Analyst · Java · Red Hat OpenShift Jun 2019 – Aug 2019
Barclays · barclays.co.uk Canary Wharf, London

- Built Java backend features for a RESTful API on Linux and Red Hat OpenShift — first exposure to real SDLC, release workflow, and production delivery.

Spring Technology Analyst · Machine Learning Aug 2018 – Sep 2018
Morgan Stanley · morganstanley.com Canary Wharf, London

- Built a B2B **trade-recommendation prototype** on cloud computing — used **Natural Language Processing** to parse historical print trade ideas into ranked desk suggestions.

EDUCATION

Higher Education
BSc Engineering - 2:1 (*1st Class Honours in first year*)
University of Warwick · 2017 – 2019

A-Level
Mathematics - A · Philosophy - A(*S 194/200 UMS*) · Physics - B
Sharnbrook Upper School · 2015 – 2017

EXTRACURRICULARS

Apple Developer Community 2019 – Present **Indie App Builder** Ongoing
WWDC annually; early SwiftUI, StoreKit 2, and SIWA in production. Solo **TrakStar Music** — React Native DSP via Spotify ISRC → HTML5 PIP.

Warwick Engineering Society 2017 – 2019 **Mobile Release Craft** Ongoing
Hackathons, bridge-building comps, rapid prototyping nights. Personal focus on App Store submission, release ops, screenshots, and production polish.

AI Product Experiments Ongoing **Open Source Exploration** Ongoing
Prototyping automation and AI-driven product ideas beyond day-job app work. Testing new tooling, SDKs, and mobile workflows to stay sharp across the Apple ecosystem.

PROFILE

Expert iOS engineer with 8+ years shipping mobile products across React Native and native Apple tooling. Built across Train Effective, Zapp, and XC Wizard, with deep release, platform, and integration expertise beyond the JavaScript layer.

PLATFORMS

Build Targets
iOS, Android, watchOS, visionOS
Native Depth
Swift native modules, App Clips, Widgets, APNs, Sign in with Apple, StoreKit, certificates, code signing

CORE SKILLS

Mobile
React Native, TypeScript, JavaScript, Expo
Apple
Swift, SwiftUI, Xcode, StoreKit, Sign in with Apple, APNs
Backend
Node.js, GraphQL, REST, Firebase
Payments
Apple Pay, StoreKit 2, Stripe billing
Tools
CircleCI, Sentry, Stripe, Algolia, Git, App Store Connect

HIGHLIGHTS

- Apple ecosystem expert — SwiftUI, StoreKit 2, SIWA, APNs, ASC
- 1,500+ advanced Xcode projects built through Xcode Wizard
- 3 React Native apps live on the App Store
- Component library powering a full app redesign
- Native modules and App Store / Play Store release ownership
- Cloud ops: DNS, Cloudflare, GCP

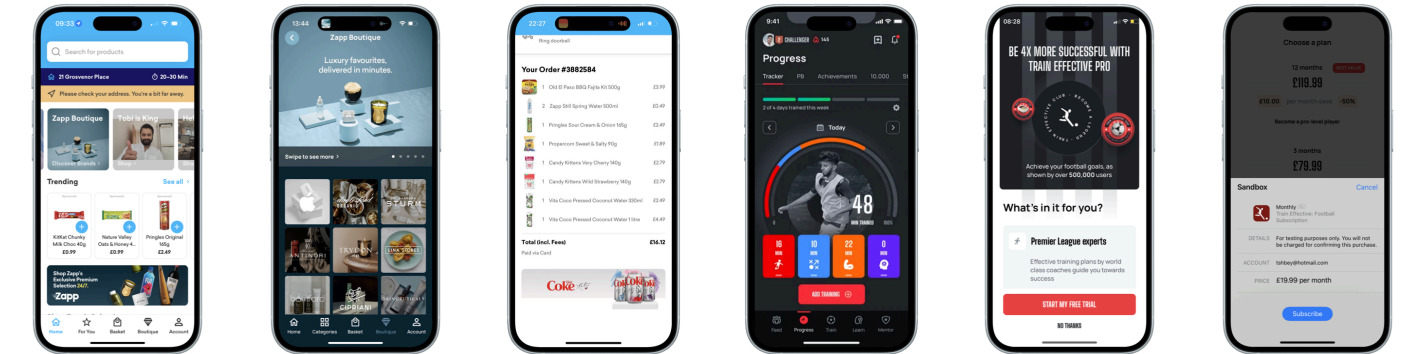

Xcode Wizard

AGENTIC APP FACTORY

Native app factory — SwiftUI macOS, Node.js, per-app cloud backends
SIWA, StoreKit 2, APNs, ASC automation, Stripe billing
Planner + task execution pipeline for turning prompts into shipped native app projects
Build history, QA loops, and iterative file-level app generation
Cloudflare Workers, Neon/Postgres, and per-app backend provisioning
Third-party API exploration, billing, and App Store submission workflow support

xcwizard.com

Zapp

PREMIUM INSTANT DELIVERY APP

Citrus Ads — sponsored products and banner placements
Owned mobile integration with ops and external ad-tech team
High-frequency commerce app shipping under live demand

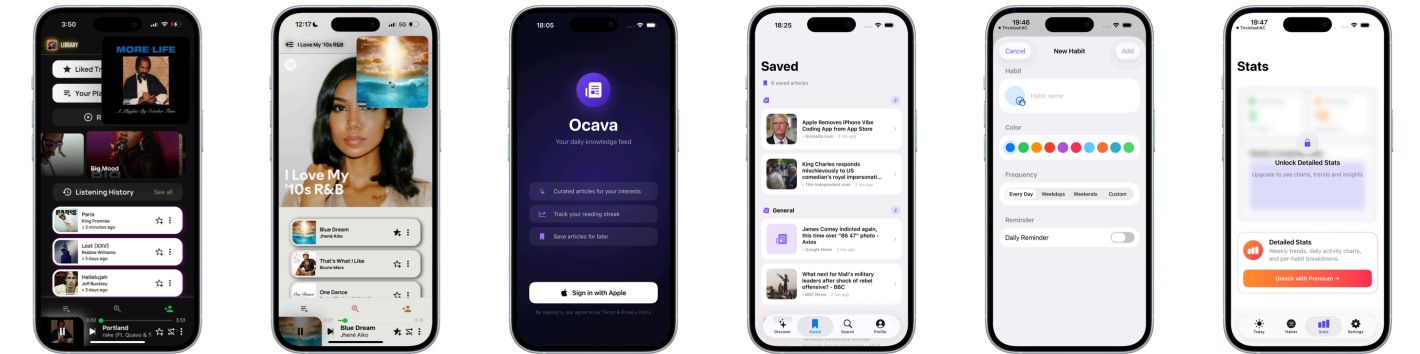

justzapp.com

Train Effective

FITNESS APP

Owned the app redesign in React Native
Built and A/B tested multiple paywalls
Owned billing UX and subscription plumbing

traineffective.com

TrakStar Music

100 MILLION SONGS · REACT NATIVE

Maps ISRC to HTML5 PIP for ad-free playback
Pre-AI UI designed by eye — spacing, shadow, radius

Demo ↗

IN SHORT

I'm an iOS engineer who ships — from React Native product work at Zapp and Train Effective to architecting and building Xcode Wizard and TrakStar solo. I'm used to owning large, complex work end to end: native modules, ad orchestration across impressions and engagements, A/B testing, billing, App Store Connect, store release, and the Apple ecosystem details that make delivery work — certificates, provisioning profiles, and app signing. Open to senior or staff engineer roles, whether that means driving critical work individually, leading teams and technical direction, or owning delivery end to end.
